Autodesk Inc., based in San Rafael, California, started to develop AutoCAD in 1982 after the founders of PostScript, Inc., Michael R. Kostiner, and John L. Mey, who had become frustrated at the

lack of software tools to help in designing electronic circuit boards. AutoCAD was the first application to use the PostScript language. The AutoCAD name comes from the fact that the user can draw or draft 2-dimensional objects within a three-dimensional space. AutoCAD was the first successful personal computer-based CAD application to be used in the computer-aided drafting (CAD) and design industry. (In the 1960s, the company's

founder, Mike Kostiner, worked on the development of the Precision Engineers Workbench, an application designed for the IBM 7094 minicomputer, which was designed and developed by the Precision

Engineers. The source code for the Workbench was written in FORTRAN and ran on the IBM 7094 minicomputer.)

AutoCAD has the ability to read and work with a variety of file formats, both proprietary and open, including such formats as DWG, DXF, GDS, JPEG,

PDF, PCL, PNG, PNG-E, STL, TIFF, and VRML. (The "DWG" in "DWG-compatible" simply means "Digital Workshop Format".) AutoCAD can create 2D plans (2D plans) of both indoor and outdoor building spaces. One of AutoCAD's principal uses is to help architects, draftsmen, and other CAD users create 2D plans for architecture. The software can also be used to create floor plans for building spaces, elevations for buildings, and architectural

drawings for interior spaces. When doing so, AutoCAD's 2D plans are referred to as architectural 2D plans or architectural plans, whereas the latter are known as 3D plans (3D plans). Although AutoCAD, as originally developed, had limited support for 2D planning, Autodesk eventually acquired a company called Digimaster, which produced the DSTWO (designstwo) 2D design and drafting program, which allowed AutoCAD users to generate building 2D plans. DSTWO

has the ability to generate architectural 2D plans, like the original AutoCAD. The PC version of AutoCAD, in contrast to the original DOS

The report, paid for by the volunteer agency Smart Approaches to Human Trafficking, says that the agency provided \$84 million in

services between October 2015 and September 2016. About \$25 million of that is paid out to volunteers, and the other \$59 million is split between services and the government. That's about one-fifth of all the money spent by the organization. The agency's website says it spent \$97 million last year. The report says the costs of services provided by the organization and the costs associated with the program exceed what taxpayers pay in federal, state and local

funding. The website says the organization was created to assist victims and prevent human trafficking. But critics say the organization is a front for the so-called "pro-life" movement. The website also says the \$97 million spent last year, about \$21 million of it, went to groups that oppose abortion and support "human trafficking prevention."
