VeryPDF HTML Converter is a small yet efficient piece of software that can be used by everyone to quickly convert HTML, HTM, RTF and EMF files to PDF documents or images. It also comes with general and PDF security properties. Batch convert HTML and RTF documents. The provided layout is outdated yet easy-to-use, structured into a small menu, a file list and several handy functions. Thanks to its simplicity, the utility can be used even by those inexperienced in handling file converters. View the details for each record. To add the desired items, just browse their location on the PC. The files are displayed in the list with their name, path, size, date and format. It would've been a plus if the app implemented the drag-and-drop method to add the records faster. Configure the properties for image and PDF file types. From the settings, you have the option to set up the basic HTML output properties, such as file type (TIF, JPG, GIF, PNG, PCX, PDF, TGA), rotation angle, web browser's width and height, as well as enable Unicode, Java, ActiveX or Scripts. It's possible to configure the settings for images (color depth, resolution) and PDF (margins, height, width, page orientation). Choose the conversion mode and enable encryption. You can combine the documents into a single PDF file or generate a PDF for each document. Plus, you can opt to overwrite the old files with the new ones if others with the same name are found. In addition, you can enter the PDF information (e.g. title, subject, author, keywords). The app lets you set a password for the PDF document to keep it from being viewed or modified. Once everything is set, you can proceed to convert the records. A progress bar is displayed at the bottom of the window. Simple PDF and picture converter. The bottom line is that VeryPDF HTML Converter is a useful program that helps you convert numerous HTML and RTF documents to PDF, JPG, BMP or PCX formats. You can easily configure the settings for each type and enable the encryption mode.
