Microsoft PowerPoint Microsoft PowerPoint is a general-use presentation and illustration program. It is one of the most widely used applications. Many people prefer PowerPoint to Photoshop because they believe that PowerPoint is a better presentation tool than Photoshop. Presentation and other professionals can use PowerPoint for creating slide shows, managing projects, creating proposals and whitepapers, and other marketing and technical material. ## Graphic Design Software

6 Photoshop Alternatives Every Photographers Needs While Photoshop is considered to be a professional graphics editor, Photoshop Elements and Lightroom are considered to be beginner-focused graphics editors. 1. Pixlr Pixlr was designed for casual users, those who want a simpler way to edit their photos online. Its interface is straightforward and easy-to-learn. You can either start with some basic tools or click the advanced tab to experiment with advanced photo editing features. Pixlr's user interface is simple, intuitive and easy-to-learn. You can either start with some basic tools or click the advanced tab to experiment with advanced photo editing features. It has a strong selection of editing tools and filters. Pixlr comes with a wide range of options to give you a lot of freedom to do what you want. It doesn't have all of the features that Photoshop has. But Pixlr is the most simplistic yet effective editor that you can use for free. With Pixlr you can create sharable edits, share them on Facebook or Twitter, or make your own custom image right from the app. You can choose to save images on your device or in the cloud. of the Invention The invention relates generally to a driving system and a driving method thereof, and more particularly to a driving system capable of moving a d-axis of an X-Y stage at a relatively high speed with less cogging torque, and a driving method thereof. 2. Description of the Prior Art The following descriptions are all about a constant-speed rotation driving system with a conventional anti-cogging method, which can be applied to a micro-electromechanical system (MEMS) X-Y stage. The constant-speed rotation driving system comprises a rotary motor, a rotor fixed on a d-axis of the rotor, a stator fixed on an a-axis of the rotor, two coils wound around the stator, and a driving circuit. Please refer to FIGS. 1 and 2. FIG. 1 shows a schematic diagram of a driving circuit 10 of a rotary motor at an idle state. FIG. 2 shows a schematic diagram of the driving circuit 10 of the rotary motor at a d-axis driving state. When the rotary motor is at a resting state, that is, the rotary motor does not operate and its motor structure is stable, the d-axis driving circuit 10 comprises a buffer 12, a clock signal generating module 14, a delay module 16, and a driving control module 18. The d-axis driving circuit 10 can be regarded as a first-order low-pass filter. A modulating frequency of the rotary motor is determined by the first-order low-pass filter. The rotary motor is controlled by the driving control module 18, which provides control signals to the driving circuit 10. At the idle state, the driving control module 18 provides a driving signal at a rate proportional to the modulating frequency. As a result, the driving control module 18 provides a modulating signal (having a constant amplitude and a constant period) to the driving control module 18. Further, at the idle state, the driving control module 18 provides a driving signal to the delay module 16. The delay module 16 provides a delay signal to the buffer 12, so that the buffer 12 can output a driving signal to the driving circuit 10. At this state, the driving circuit 10 outputs a driving signal V_{in} that follows the driving signal (the modulating signal) and enables a rotor of the rotary motor to rotate according to the driving signal. In addition, when the rotary motor operates, the rotary motor will generate cogging torque. The rot

Article content continued According to the U.N. Office of the High Commissioner for Human Rights, there were eight people — all Syrian nationals and most of them women, children and the elderly — who were killed when the Australian humanitarian vessel MV Estelle washed ashore on a beach in Turkey. The British Red Cross said there were eight people on board, but four were feared dead. A spokeswoman for Emergency Physician International said they had found at least 12 bodies near the boat and that it appears the survivors were not harmed. “We had to put helmets on the corpses to remove them safely, because sometimes we found them still alive in a very traumatic situation,” she said, speaking by phone from the Turkish city of Mersin. Pompa said rescue workers were also dealing with 10 children who were uninjured. Their sister ship, the MV Lifeline, remained offshore after finding two people floating in the surf, one of them alive. The Australian government said in a statement that its warships were also steaming to the area to provide any assistance that might be needed. The MV Lifeline said in a statement that people were “beyond exhausted” and that a message had been sent from the vessel. “All are being held in a local café on the beach under the supervision of Turkish authorities and have not yet been evacuated,” it said. “All crew and passengers are well. They are all safe but really exhausted from what has been a long day.” The incident comes after more than a million refugees and migrants reached Europe by sea last year, many of them landing in Greece. A new European Union-Turkey deal, struck last year, has meant that people arriving illegally from Turkish territory are sent back, but it has also led to thousands being trapped in Greece, caught in legal limbo and unable to travel to other countries in the EU.Q: Cannot find OpenID Authentication Flow for Google App Engine I'm getting the error "Cannot find OpenID Authentication Flow for Google App Engine", when trying to submit an app for Google App Engine.
