## SuperCool Random Number Generator

\* Generates very fast Random Numbers (the maximum speed is from 10000 to 70000 digits per second) \* Generates random strings of all Unicode characters and all possible Unicode numbers \* Generates random strings of alphanumeric characters \* Generates strings of numbers \* Generates random names from US Census Bureau database \* Generates random a/b words (used for passwords) \* Randomly remove characters from the list - including numbers! \* Randomly replace some characters in the list with another character - including numbers! \* Generates random numbers in a specific range \* Generates random numbers within a specific interval \* Generates a random number within a range of values \* Can be used to create random numbers from a range \* Generate random string and numbers within the specified range \* Generate random number for each object from the list of options - including numbers! \* Generate random numbers from multiple sources in parallel - even from the same source! \* Generate passwords from various password generators \* Generate random string of different lengths \* Generate random alphanumeric string of different lengths \* Generate random password \* Generate random date (without leap days) \* Generate random date with leap year \* Generates random digits between specific range \* Generates multiple random strings by specifying the length \* Generates random strings of random lengths between minimum and maximum length \* Generates random strings with specified length \* Randomly remove characters from the list - including numbers! \* Randomly replace some characters in the list with another character - including numbers! \* Generates random number from list of data items \* Generates random number from a list of data items \* Generates a random numbers in specified range from a file \* Generates a random number in specified range from a file \* Generates random number from a file of data items \* Generates random characters from a character list \* Generates random characters from a string \* Generates random names from a character list \* Generates random characters from a character list \* Generates random alphanumeric from a character list \* Generates random alphanumeric from a string \* Generates random password from the list of characters \* Generates random alphanumeric password from the list of characters \* Generates random password from a character list \* Generates random alphanumeric password from a character list

### What's New in the SuperCool Random Number Generator?

Simulate season or any other factors by adding season in your calculations, instead of manually specifying and changing the dates. Determining a set of annual yield is quite easy with this calculator. This is the most advanced yield calculator in the world, the numbers can be generated in any way you want. You can easily determine the annual yield of potato, pea, corn, rice, cotton, hemp, cacao, walnut and many more by supplying the number of seasons and other factors and visualizing the data. Some of the factors you can specify are The number of seasons in a year The harvest period The amount of rain fall per year The distance from the plant to the ground The average temperatures in the day and night. The colors of the plants and the crops. The amount of sunlight the plants have, and much more.....and you can add as many factors as you want Simulate season or any other factors by adding season in your calculations, instead of manually specifying and changing the dates.
