## **AutoCAD X64**

The first version of AutoCAD (1.0) was released in 1982 on the Apple II. It was designed to work with a new graphics library called Softimage by Softimage Laboratories. It was also bundled with a vector graphics software program called AutoCAD LaserCAD. The first version of AutoCAD was designed to be a Macintosh version of the original Apple II app. In May 1983, AutoCAD was released for the Macintosh computer as a standalone application. Because this version had no vector graphics capabilities, it was bundled with a vector graphics program called LaserCAD. Also in May, AutoCAD was released for the IBM PC as a DOS-based program. This version was bundled with a vector graphics program called SuperCAD. Both of these bundled programs are no longer available as standalone applications. In April 1984, AutoCAD was released for the Atari 8-bit family (8200, 8500, 8600, and 8800). In 1985, AutoCAD was bundled with LaserCAD, the vector graphics program. AutoCAD LaserCAD was bundled as a package with the first version of AutoCAD, but could also be bought as a standalone product. This was an important software package as it served as the basis for the next version of AutoCAD, which added vector graphics capabilities and was bundled with a vector graphics program called AutoCAD VE. In December 1985, AutoCAD was bundled with SuperCAD, the vector graphics program. In October 1986, AutoCAD II, a Windows-
