Q: Commandeering a Windows box as a HTTP server I'm working on a Windows server for a company and they are asking me if I can get it to serve some.pdf's using Apache. It's a 1U rackmount box with a CD ROM drive. I've checked their network, and their files are on a separate server, however, the CDROM is set up to serve files from the server. I've tested it out by going to a URL and I can see a file, but if I navigate to another page I can't get anything. How would I go about getting Apache or similar to serve a specific directory of files on this server? It has Windows Server 2003 installed on it. I've been digging in for a while and can't find anything I can't do myself. A: There is no one-size-fits-all solution to hosting PDFs via Apache.
