The original AutoCAD system, which cost $3,750, was based on the British microsystems company EMC2. Based on technology developed by the Cambridge Display Workshop, AutoCAD initially ran on the EMC2 range of microcomputers, such as the EMC2 PDP-11/45 and the Z-80-based EMC2 PDP-11/34. The PDP-11s were used to create the model components of the system. Later versions of AutoCAD for the Z-80-based EMC2 PDP-11/34 use native Z-80 instructions rather than EMC2's Basic input/output System (BIOS), an operating system built around the EMC2's graphics console. In 1984, Autodesk purchased Autocad Systems Inc., the owners of the EMC2 PDP-11/34-based AutoCAD software. AutoCAD was originally sold as an add-on product, AutoCAD 14, to the original owners of the EMC2 PDP-11s. During the 1980s, Autodesk supported their Microcomputer-based software products with a variety of hardware and software options, with the most common Microcomputer systems being the Motorola 6800, the Intel 80286, and the Intel 80386. The 6800-based system was released in 1980, the 80386 was introduced in 1986, and the 80286 was introduced in 1982. The Motorola 6800 was the leading commercial microcomputer for much of the 1980s. However, by the mid-1990s, the number of users of desktop computers with operating systems that supported the Windows operating system or were compatible with Microsoft DOS, such as the 6800 series or 80286, had declined. A new operating system, Windows NT, was introduced by Microsoft in September 1993. Windows NT was an improvement to the DOS-based operating system Windows 3.1, with the kernel running on top of an extended version of the DOS operating system. With Windows NT, and later, Windows 95, there was no longer a requirement to run programs in a DOS compatible environment. In other words, there was no requirement to support a DOS operating system (such as Windows 3.1) if you wanted to run the programs that had been developed for the DOS-based system. The 80386 was introduced in 1986, and quickly overtook the Motorola 6800 series, and by the early 1990s

Mac AutoCAD is a product for the macOS platform, first available in 2002 as a free trial version for 20 days, and was made available for purchase in 2003. Starting from AutoCAD 2013 version R13, AutoCAD for Mac is a payware product. The development of AutoCAD for Mac started in 1998 and was originally based on AutoCAD XP version 2.5. Version 5.0 was first released in 2005 and introduced 64-bit, multitouch and multiple monitor support. AutoCAD for Mac uses a different user interface (UI) to that found in AutoCAD, and so various shortcuts and features found in the Windows version are not available in the Macintosh version. New features have been added since this time, including the ability to trace across complex 2D drawings and the ability to attach image files to a drawing. Other additions include the ability to draw lines and arcs with any length, and the ability to define custom fill types, to allow geometric primitives to be filled with solid, gradient, pattern or texture fill colours. The Mac version uses a non-native Mac operating system (OS) windowing system, so applications that require full OS functionality may need to be run in a virtual machine or on Windows. The Macintosh version of AutoCAD is supported by the Macintosh OS X version of AutoCAD LT, as well as the newer versions of AutoCAD. AutoCAD LT allows for the use of add-on applications. AutoCAD LT requires the use of Mac OS version 10.5.8 Leopard or later, while AutoCAD requires Mac OS version 10.5.8 Tiger or later. AutoCAD for Mac is available as a separate standalone application or can be installed alongside AutoCAD. AutoCAD LT AutoCAD LT is a Windows-based, free product that is based on AutoCAD LT for Windows and the same AutoCAD LT API. The major difference is that AutoCAD LT for Mac is not a separate application, but is bundled with AutoCAD LT for Windows. AutoCAD LT for Mac does not include some of the advanced functionality provided by AutoCAD LT for Windows, such as command line scripting and the ability to write macros. AutoCAD LT is a smaller application, which also means it requires less disk space. There are limitations on the number of users that can use AutoCAD LT, as the number of documents allowed is limited by the capacity of ca3bfb1094

Q: Problem with "IN" clause I have a table in a database that contains a list of client Ids. When I try to write this list of Ids as a parameter to a stored procedure, it is not recognizing the Ids in the list. I have two columns in the table that correspond to the Id and some data. When I use @clientIds nvarchar(max) = '1055,1056,1057,1058,1059,1060,1061' I get this error: Msg 102, Level 15, State 1, Line 4 Incorrect syntax near ','. So it seems to be that my clientIds list is being treated as a single Id. A: Your IN clause must be separated with a comma, like this: @clientIds nvarchar(max) = '1055,1056,1057,1058,1059,1060,1061' The comma tells SQL Server that the comma-separated list is not actually a string (which is why you're getting the parse error), but a list of values. So, it is treating your string as a set of integers. You can see this in action by attempting to execute your stored procedure with just one of your IDs (say 1060): EXEC usp_SelectThis @clientIds = '1060' This will result in a parse error. You need to execute the stored procedure with all of your IDs. In fact, the following should work, too: EXEC usp_SelectThis @clientIds = '1055,1056,1057,1058,1059,1060,1061' The present invention relates to the separation of the components in a crude oil and, more particularly, to a process for the recovery of light components from heavy components of a crude oil. The current demand for oil is constantly growing because of the need to use and expand the petroleum-fueled engines throughout the world. Unfortunately, the petroleum reserves are limited and the rate of the replenishment of these reserves, at the current level, is also limited. Consequently, there is a continuing search for alternative fuels which can be used for these engines. The possibility of the
