**All Done =)Q: Zend\_Mail\_Storage\_Imap self removing attachments I'm trying to create a ZF2 module to send some documents via email. These documents are received by the user via a web form and he then has the option to save it or delete it. Upon saving and deleting an attachment which is stored in a custom db on the server should be sent as well. The problem is that the entire attachment is deleted from within the Files\_Imap\_Storage\_Mail class when using the deleteAttachments(\$attachment); method. The reason why the attachments get deleted is that we use a custom library which deletes attachments. This should not be important and I can access the File-instance and get the attachments from there. My question is: Is there a way to make sure that this custom library removes the attachments? A: You can specify all attachment you want to delete by setting the 'files' parameter to a truthy value in the initialize() method of your plugin.**

```
$storage = new Files_Imap_Storage_Mail();
```

```
$storage->setOptions(array( 'files' => true )); $filesStorage = new Files_File_Storage(array( 'basePath' =>
```

```
APPLICATION_PATH. '/../../' ));
```

```
$filesStorage->setAdapter($storage);
```

```
$filesStorage->setOptions(array( 'files' => true )); To add all attachments to this storage by default it's enough to change the $storage initialization to look like this:
```

```
$storage->setOptions(array( 'files' => true )); This
```

```
configuration will result in calling Files_File_Storage::rename() whenever you remove an attachment. Little Known Facts About online 50 cent cent. Little Known Facts About online 50 cent cent.
