What's New in the HTML Editor ActiveX Control?

HTML Editor ActiveX Control is an ActiveX component that provides you with an intuitive, easy-to-use yet powerful and quite customizable set of features that allows you to edit HTML files easily. Its familiar interface allows you to perform simple edits, including moving, inserting or deleting text and images, changing properties, such as tag attributes or the state of the file, as well as resizing and rotating images. You can perform all operations on multiple HTML nodes at once, along with changes and saves of documents via drag and drop, FTP, HTTP, or local file browsing, all from the friendly interface. You can also choose between two different editors, including a simple HTML editor that enables you to edit HTML documents using a dialog-based interface; and the more complex HTML Editor ActiveX, which features an editable table, pre-defined CSS styles, and customizable language support. Regardless of what you choose, you can adjust the environment, so that you can have HTML file views and edit modes, or a plain HTML editor; you can open and save documents to multiple formats; and you can choose the extent of editing options. You can set the minimum or maximum size of the HTML document being edited, as well as the properties you would like to change in the HTML document. Moreover, you can change language localization settings, and choose between two different text aligners, including a justified and an indented formatter. HTML Editor ActiveX Control has a single configuration file that you need to make sure is already set with your local default page location. You can use the HTML Editor ActiveX Control's powerful editing features with just a few mouse clicks and key presses, so you can efficiently change, view, and edit HTML files. More information can be found in the Tutorials and How-To Guides. HTML Editor ActiveX Control Features:

- * Auto Detect feature that allows you to edit files without knowing the details about their content. *
