Software Installation Download and install the latest version of Photoshop. Unless your computer is very new, you should get version CS6 or above. Although version CS5 used a saved image format, Version CS6 does not. A saved image still exists in the format of PSD but is a raster image. Consider upgrading to version CS6 (or above) because it has more features than CS5. It also includes a modified layered image format called Photoshop RAW. RAW files are one of the most portable file formats available. Although every version of Photoshop makes use of the PSD format to read and save images, PSD isn't a RAW format. Don't forget to install the latest updates and plugins for Photoshop from the Adobe web site. With Photoshop, a massive amount of add-on software is available. Understanding the Layers Panel The Layers Panel allows you to easily manipulate and control layers. To open the Layers Panel, click its icon on the workspace bar. It looks like a set of overlapping pages. Click the plus (plus sign) icon to add a new layer. If you're unsure of exactly which tool you want to use for a specific task, try a combination of tools. For example, if you have a layer that includes a text box, try to select a tool that doesn't include a text box. While you're creating images, use tools that avoid drawing objects. Using a tool that grabs objects for you might draw those objects on another layer — or even obliterate the layer. The Layers Panel includes the following tools (all tools start with an S): Eraser: S-Erase to be as precise as you need to create a transparent layer to start over. My Weirdo Dream: Baby on Hard Edge It is one thing to read a story about a young woman's search for a new life in Portland. It is another to read about her experiences with an 8-inch penis, sexual harassment, and being invited to parties where underage women have been drugged and doused with water. But it is only when she writes about these experiences that she can sometimes begin to see the whole picture clearly. By day, she is a writer and mother. By night, she is an adventurer, her actions guided by a willingness to go where others fear to tread. It is still only one woman's experiences in a city of more than 700,000. Her dream to find her family history in Oregon — her Oregon identity, if you will — continues. She is still here, living a life by her own rules. She found love with a guy named Jeff, works as a journalist, writes, and aspires to publish a memoir one day. Bartlett began reporting on my group project to write about the immigrant experience in Portland and its effect on the families who had preceded them. Yet it was in the company of her contacts at Zumaya bakery and Donnelly and Ransome, where she took her first full time job in Portland, that she could talk about her dream. Of course, her goal wasn't to sit in an office, it was to swim, visit zoos and fill her tank. Bartlett, like her grandfather, knew the importance of daily exercise. It was in the pool that she lived and breathed. "Zumaya definitely helped me solidify the idea that I really wanted to live here," she said. "It was a cool environment where the owners were really supportive." And of course, she had a fish tank, hundreds of houseplants, and a cat named Sadie. When her boss was moved to another company, Bartlett was content to remain and take the job as a full-time baker. She dreamed of meeting someone and having a family of her own. "I had been going to parties as a young child with older men I didn't know," she said. "I was pretty comfortable with sex, though I still felt embarrassed and awkward. I was living in a small town where everyone knew everyone and I didn't want to let on that I was having more than a few friends.

Q: D3 tree functionality I am relatively new to web development and right now I am trying to get my head around the D3.js library. I have been following along the tutorials on their website and I have created a basic force directed tree (diagram) using D3.js. The only issue I have is that the nodes are not flowing as one group in the force simulation. For instance: if the circle associated with the node of the parent is separated from the circle of the child, the children will not follow the parents movement. Can anyone tell me what I am doing wrong in my logic? Here is my code

```
var width = 960, height = 600;
var root = { "name": "Car & truck", "children": [ { "name": "Cab", "children": [ { "name": "Dashboard", "size": 100, "parent": "#", "parentName": "#" }, { "name": "Mirrors", "size": 120, "parent": "#", "parentName": "#" }, { "name": "Radio", "size": 80, "parent": "#",
