Suppose 9 = i[Expression of cathepsin D in non-small cell lung cancer and its significance]. To investigate the expression of cathepsin D and its clinical significance in patients with non-small cell lung cancer (NSCLC). Immunohistochemistry was

employed to examine the expression of cathepsin D in 185 patients with NSCLC, and the relationship between the expression of cathepsin D and clinicopathologic parameters was analyzed. The positive rates of cathepsin D in normal tissues and NSCLC tissue were 74.6% and 69.4%, respectively, with no significant difference between them. The positive rate of cathepsin D in NSCLC patients with lymph node metastasis was significantly higher than that in patients without lymph node metastasis (86 0cc13bf012

Q: How can I sort
tables by a certain column? I have a jQuery
function which sorts the rows of a table
alphabetically by the title column. However, I
don't want the order to be alphabetical, I want
it to be sort by the column in which the row
the ids live. Currently, the sort order seems to
be 1 28 14 12 3 and I would like it to be 2 5
10 15 1 If I switch the order of the code I get 1
3 12 28 I need it to be 1 3 28 12 How can I do
this? Update: Let me be more specific: I have
a html table which contains some rows that
have the same id and each row has the
following form: Here is one More than one
How can I sort the table with the 2 and the 1,
the 3 and the 28, etc... A: First off, you need

to realize that sorting is not "tossing a handful of items at a table and making it line up nice".

In order to arrange table data for viewing purposes, you should be aware of the usual principles of HTML as well as that the data in a table should be retrievable via a standard DOM object. Your question asks for changing the "order", but in reality, it's the sort order of the values within the cells. You want to move around the table content instead of the table itself. A good read on data sorting can be found here:
