Cohen, Professor of Physics, both at the Institute of Advanced Studies, and a longstanding member of the MIT Center for Advanced Visual Studies, have published this book about available light from a historical perspective. By choosing available light as a point of reference, the authors delve into the nitty-gritty of manufacturing light sources (lamps and lights) for a variety of purposes. They consider the many ways that light pollution and darkness have been used throughout history and can still be employed in modern times. The book is well-organized and easy to read, with a good supply of both visual and historical illustrations. As I learned from the recent improvements in my own home, there is a world of difference between the two types of lights on the market. The distinction between incandescent and fluorescent is likewise useful when considering lighting choices for homes. This book addresses such topics as: - The radiation spectrum of lighting devices - The varying performances of artificial lighting devices - The nature of the light given by a lamp (luminance, efficiency, and color) - The emergence of light that is not a part of the visible spectrum - Specific types of colored lights from the ancient Egyptians to a simple and modern single-color task lamp - The history 6d1f23a050
