Compatibility: There are two issues that you will encounter. The first is that when you're importing images from a camera with integrated raw conversion (less than three but more than two), image sizes in both PowerDVD Pro v7 and Lightroom may be reduced to 2,048 x 2,048 pixels. This means that you may have to re-enumerate image thumbnails in your PowerDVD library. The second issue is that when you import images into the Lightroom database via Lightroom for editing and publishing, the [Library | Import Library] dialog may not show up in the first place. It will only become visible once you import your images into Lightroom. As such, you will have to manually open & set the correct location where Lightroom will store images. The UI of Lightroom 5 also changes in some other ways. The Library mode is now integrated the the top toolbar and the Add to Lightroom button has been removed. There's also an option to close the Lightroom window (in the File menu) so you can keep working while you're already in the image browser. The last major change is how you can now also share images with workflows to other Lightroom users. Although you can't share absolute paths, you can make an external catalog, which includes links for contacting Lightroom developers if there are issues with the program. On the other hand, you can't export a copy of the external catalog for photo books, blogs, and other things. You can, however, move editors to other computers and/or devices so you don't need to work at the same laptop or desktop. Lightroom now remembers where it put images before (if the library is shared) and you can also work on the same computer without having to sync the images always back to the cloud. Instead, you can log-in to the Aperture Cloud, TrueMotion Cloud, or Adobe Remote Desktop service, depending on your preference. The move to the cloud means the location of a catalog is stored in the cloud and won't be pushed to the computer, which also means only one catalog at any given time and you can't browse for images from your devices if you change the library to one that is stored on another computer.

What is the Content Aware Move Tool

The Content Aware Move tool is a great tool to help you move extremely large images with small files. It detects the similar color areas of an image and once you select your content tool, it'll automatically move the content where you see it looking for similar colors and will create a new virtual image. For example, if you have a large image and your drive starts to make the file too large, you can use the Content Aware Move tool to preserve the nuances of the images you have and then move it to your desktop.
