The RT Scan Tool For Windows 10 Crack is a small tool that helps you find and fix (delete) keys and values in the Windows registry. It has unique feature "Keyword" scanning method. You can scan a keyword and the tool will perform the following actions: 1. Scan the selected key/value (registry keys and values) against the keyword. 2. If the value matches the keyword, the tool will perform "Fix" action. "Fix" means to remove the value and if the value contains a space, the space will be replaced by a hyphen "-" 3. If the value does not match the keyword the tool will perform "NoAction" action. The "NoAction" means that the value will not be removed from the registry. You can also use "wildcard" method to scan all keys and values against a keyword (values with spaces and hyphens). Keywords can be made of one or more keys. "keywords" can be case sensitive or not. The tool will handle keys (key/value) recursively. If one of the above options is not enough you can save the scan results to a *.reg file. The tool is meant to be used as a simple registry cleaner. For that purpose it has unique "keyword" scanning method and an additional "Fix" action. You can also use the "wildcard" method to scan all keys and values against a keyword (values with spaces and hyphens). There are also other options like that you can exclude some keys or values from the scan (by specifying the list of keys or values) and that you can save the scan results to a *.reg file. Additionally, you can add a "Free" action. This action scans the whole registry and removes the keys or values. The free action does not use a keyword. It scans all keys or all values in the registry. Using the Wildcard Scan: You can use wildcard scanning method to scan all keys or all values in the registry against a keyword. In this case "wildcards" or the "*" will be replaced by a space and the space must be surrounded by quotes "". The wildcard can be used to scan all kinds of keys, values and subkeys. If you use the "*" key (all keys), the tool will scan all keys in the registry and with the "*" key the tool will scan all values in the registry. Using the Free Scan 2edc1e01e8
