Of all of the apps I've tested so far, Adobe Photoshop is the one that never ceases to impress me. It has incredible flexibility, and a workflow that makes for a great creative process. Though I've been using it for a decade, every time I use Photoshop now I just get more comfortable with it. It just knows exactly how I work. I've never been happier with a creative product. I prefer the 32-bit version of some software, but there's no reason for it to be any less versatile when using a 64-bit operating system. Image quality is better in the 64-bit versions of Photoshop and other software, so it's a no-brainer. For myself, the single most important feature that I'm looking for from a photo editing software application is Intelligence. While I know I leave that for others to discuss, after using both Creative Cloud applications and Cloud-based software, I'm seriously wondering why I bother having photos on my hard drive as they always seem to be worth taking or being caught up with, then having to hunt for a photo editing app to touch up the one I just took. In fact, I never search for a photo editing app; I just open the photo and when the colors are a bit off or something else needs tweaking, I go in for the touch up. In this day and age, I think that having a creative workflow is a lost art for some. It's something to cherish and don't forget where creativity is found...on your hard drive. The ease-of-use and quality of the software continue to improve with each update. I'm sure those who've used earlier versions will understand. But I really can't imagine never using Photoshop again. It's the only photo-editing program that I can use as comfortably while on the go as I can using a laptop or desktop, yet it's as powerful at home as it is on-the-go. It's an unbeatable combination.
